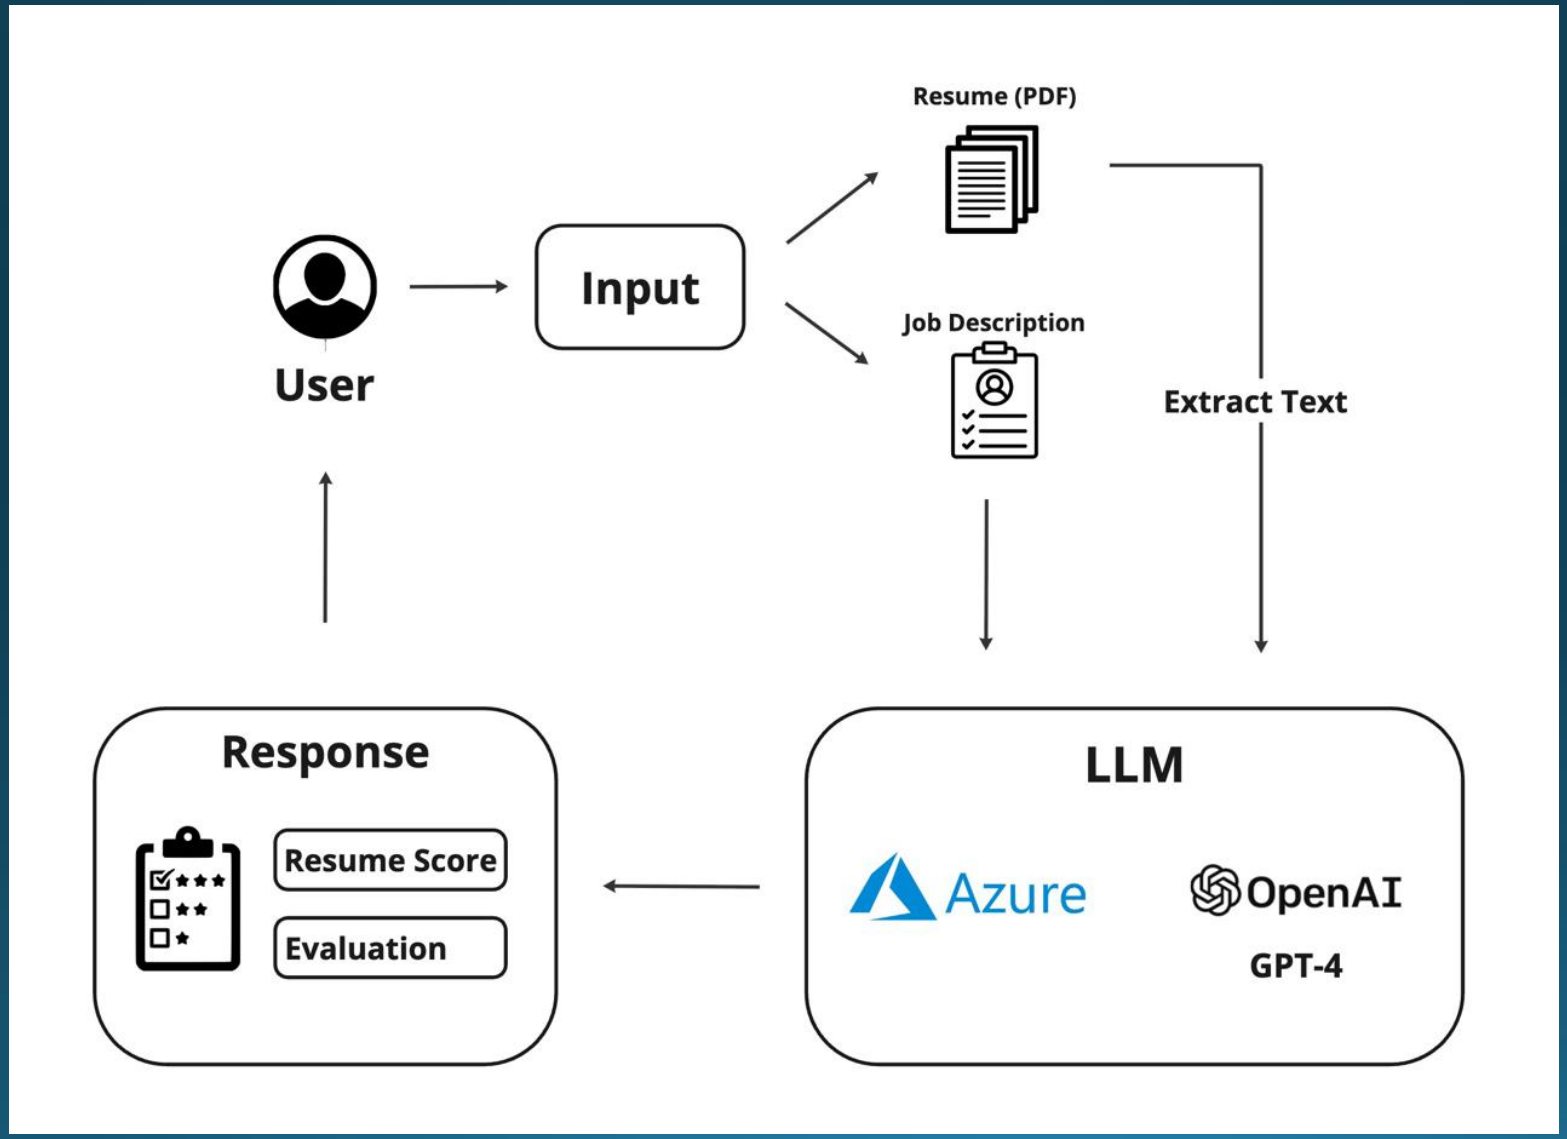
- Krishna Kant
- Supreet Maurya
- Swathi Keerthana Muda

Problem Statement

Manual resume screening is time-intensive, subjective, and prone to bias, leading to inefficiencies in candidate selection. An AI-driven system is required to automate resume evaluation, ensuring objective, efficient, and accurate scoring based on job-specific criteria.

Architecture



Technical Demonstration

Impact of Our Solution

Efficient Screening: Automates resume evaluation, reducing **manual effort and hiring time**.

Unbiased Recruitment: Ensures **fair candidate selection** by eliminating human bias.

Improved Hiring Quality: Helps recruiters focus on **top candidates** who best fit the job criteria.

Scalability for Enterprises: Can be **easily integrated** into large-scale hiring processes.

Future Scope and Enhancements:

Multi-Language Support – Expand to process resumes in multiple languages for **global hiring**.

Advanced AI Models – Integrate **GPT-4-based contextual analysis** for **deeper insights**.

ATS Integration – Seamlessly integrate with **Applicant Tracking Systems (ATS)** for **wider industry adoption**.

Real-Time Feedback – Provide **instant suggestions** for candidates to **optimize their resumes**.

Job Matching – Future iterations could **match candidates to job roles** based on AI-driven skill assessments.
